Crop-wise Total Production and Income Distribution

Crop, Season
All

Crop-wise Total Income (₹)

Crop-wise Annual Production Trend (Tonnes)

INSIGHTS:

Production Trends:
• Overall crop production shows a steady rise across years.
• Rice and Wheat remain the top contributors nationwide.
• The Kharif season dominates total output due to wider crop coverage.

Income Insights:
• Income rises with yield — higher productivity brings better returns.
• Cash crops like Sugarcane, Cotton, and Maize generate the highest income per hectare.
• Punjab and Maharashtra record strong and consistent income growth.

Yield and Efficiency:
• Average yield per hectare has improved steadily since 2010.
• Southern states show higher efficiency due to irrigation and modern farming methods.

Overall Conclusion:
• India’s agriculture shows consistent growth and diversification.
• Improved yield, technology adoption, and policy support have boosted productivity and farmer income across regions.

DATA INSIGHTS:

- The dataset was cleaned and prepared before analysis.
- Removed duplicate records to ensure accuracy.
- Eliminated blank and null rows for data consistency.
- Corrected data entry errors and standardized crop names.
- Ensured all numerical columns (Production, Yield, Income, Area) were properly formatted.
- Final dataset is clean, unbiased, and ready for visualization in Power BI.
